

The World's first
Bovine Platelet Lysate

An Ethical and Affordable Alternative to Fetal Bovine Serum

Why Choose Us

Plenty is a groundbreaking innovation in the field of biotechnology, offering an ethical and cost-effective alternative to Fetal Bovine Serum (FBS). Developed by an esteemed team of scientists from Harvard-MIT, Plenty is not just a product; it's a vision for a sustainable future in cell culture technology.

Human Embryonic Kidney (HEK - 293)

→ Eco-Friendly

Plenty is a testament to our commitment to sustainability, offering a product that reduces environmental impact without sacrificing performance.

→ Ethically Sourced

Derived from a humane and minimally invasive process, Plenty uses plasma from our own cows in our regenerative farm.

→ Cost-Effective

Addressing the soaring costs of traditional FBS, Plenty provides an affordable solution, making high-quality cell culture accessible to more researchers.

→ Quality and Safety

Certified by the Pharmaceuticals and Medical Devices Agency, Plenty meets rigorous standards, ensuring it is a reliable raw material for regenerative medicine, research, and medical products.

→ Versatility & Performance:

Perfect for a broad spectrum of cell culture needs—regenerative medicine, clinical research, and vaccine production. Plenty ensures vigorous cell growth and consistent results across various cell types.

Storage & Use Made Easy: Keep Plenty frozen at -80°C . Thaw in a 37°C water bath when needed, maintaining its effectiveness even after multiple uses.
